1. Define Management and Explain the Nature & Characteristics of Management (with simple examples)

---

1. Definition of Management

Management is the process of **planning, organizing, staffing, directing, and controlling** people and resources to achieve organizational goals **efficiently** (minimum cost) and **effectively** (achieving goals).

Simple meaning:

Management means **getting work done through people** in the best possible way.

Example:

A store manager decides what to buy (planning), arranges staff (organizing), hires new helpers (staffing), guides them (directing), and checks daily sales (controlling).

★ 2. Nature / Characteristics of Management

---

1. Management is Goal-Oriented

Management always aims to achieve certain goals or results.
Goals give direction to all managerial activities like planning, deciding, and controlling.

Example:

A company sets a goal to increase sales by 15%.
Managers plan advertising, assign targets to staff, and monitor performance to achieve this.

---

2. Management is Universal

Management principles are used **everywhere**—in business organizations, hospitals, schools, banks, and even small shops.

Example:

A **school** prepares timetable and conducts exams.

A **hospital** schedules doctors and manages patients.

A **shop owner** manages stock and customers.

All are doing **management**.

---

3. Management is a Continuous Process

Management is not done once.
It is a **never-ending** cycle of planning → organizing → directing → controlling → new planning.

Example:

A restaurant manager plans the menu daily, supervises cooking, checks customer feedback, and makes new plans for the next day.

---

4. Management is a Social Process

Management deals with **people**, and people have emotions, needs, and feelings.
So communication, teamwork, motivation, and leadership are essential.

Example:

A team leader encourages slow-performing employees, solves conflicts, and helps team members work together peacefully.

---

5. Management is Multidisciplinary

Management uses knowledge from many fields to solve problems.

Includes:

Psychology – motivation

Economics – budgeting, costing

Mathematics – forecasting, analysis

Sociology – group behavior

Example:

A manager uses psychology to motivate staff, maths to prepare budgets, and computer skills to analyze reports.

---

6. Management is an Integrating Force

Management brings together **people, machines, materials, money, and methods** so that work happens smoothly and efficiently.

Example:

In a factory, the purchase department buys materials, production makes goods, finance controls budget, and HR manages workers.
Management coordinates all these departments.

2. explain the various function of management

Functions of Management are the **basic activities** that every manager performs to run an organization smoothly and achieve goals effectively.
These functions describe **what managers do** in their daily work.

The main functions of management are:

1. Planning
2. Organizing
3. Staffing
4. Directing
5. Controlling
6. Coordination (Essence of management)

1. Planning

Planning is the **first and most important function** of management.
It means deciding **what to do, how to do, when to do, and who will do it**.

Planning includes:

- Setting objectives
- Forecasting future conditions
- Making policies
- Preparing schedules
- Identifying alternatives

Simple Example:

A mobile company plans to launch a new model.
They decide production quantity, cost, features, launch date, and marketing strategy.
This is planning.

---

2. Organizing

Organizing means **arranging resources and activities** in a structured way to achieve plans.

Organizing includes:

- Identifying tasks
- Grouping tasks into departments
- Assigning duties
- Allocating resources
- Establishing authority and responsibility

Simple Example:

In a hospital:
Doctors → Surgery Dept
Nurses → Wards

Receptionists → Front office
This arrangement is organizing.

---

3. Staffing

Staffing deals with **managing people** in the organization.
It ensures the right person is in the right job.

Staffing includes:

- Manpower planning
- Recruitment & selection
- Training & development
- Performance appraisal
- Promotions & transfers

Simple Example:

A software company hires developers, trains them in new languages, and evaluates their performance every quarter.
This is staffing.

---

4. Directing

Directing means **guiding, motivating, leading, and supervising** employees to achieve goals.

It includes:

- Leadership
- Motivation
- Supervision
- Communication

Directing ensures employees work enthusiastically and efficiently.

Simple Example:

A sales manager motivates his team, sets monthly targets, guides them on sales techniques, and provides support.
This is directing.

---

5. Controlling

Controlling is the function that ensures **actual performance matches planned performance**.

It involves:

- Setting standards
- Measuring actual performance
- Comparing performance with standards
- Taking corrective action if needed

Simple Example:

A clothing factory sets a target of producing 500 shirts per day.
If only 420 are produced, the manager finds reasons (machine breakdown, shortage of staff) and solves the issue.
This is controlling.

---

6. Coordination (Essence of Management)

Coordination means **bringing all departments and people together** to work smoothly as one unit.
It is the "essence" because every function needs coordination.

It ensures:

- No confusion
- Smooth workflow
- Unity of action
- Harmonious relationships

Simple Example:

For a product launch, marketing, production, finance, and distribution departments must work together.
Coordination ensures all activities happen in the right order.

3. discuss the levels of management and explain the roles performed at each level

There are **three levels of management**, and each level has different authority and responsibilities.
Some managers set the overall goals of the business, some work to achieve these goals in different departments, and some supervise the daily activities of workers.

The three levels are:

1. Top-Level Management

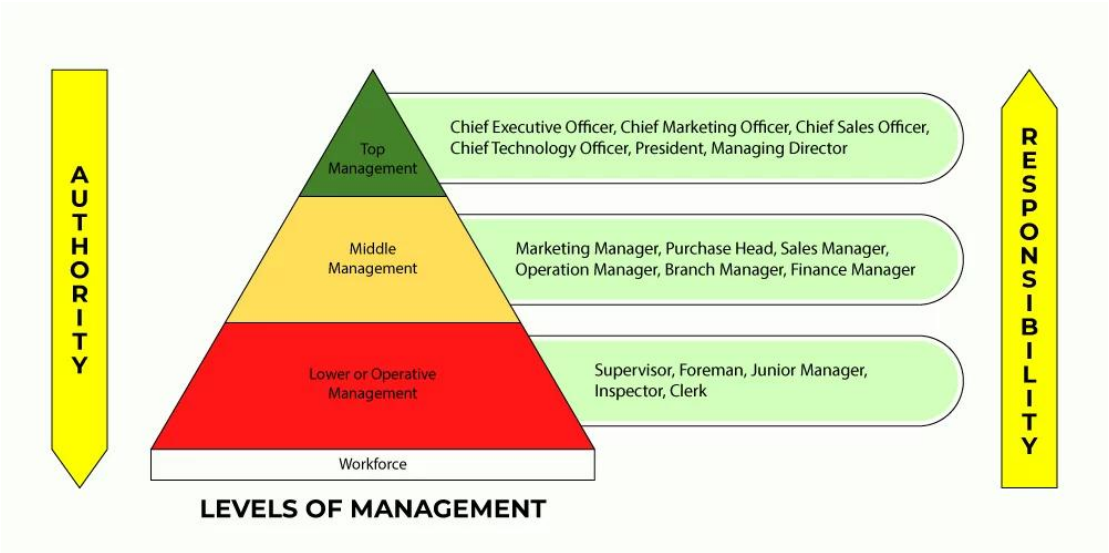
They set the main objectives, policies, and long-term plans of the organization.

2. Middle-Level Management

They implement the plans made by top management and manage different departments like production, sales, HR, etc.

3. Lower-Level Management

They supervise the day-to-day work of employees and ensure tasks are completed properly.



1. TOP LEVEL MANAGEMENT

Examples:

CEO, Managing Director, Board of Directors, General Manager.

Main Responsibilities:

Set long-term goals and vision

Make major decisions and policies

Plan for future growth

Represent the company to outsiders

Ensure all departments follow the right direction

Roles (Mintzberg):

Interpersonal:

Figurehead: Performs formal duties

Leader: Guides top executives

Liaison: Maintains external relationships

Informational:

Spokesperson: Represents company to media/meetings

Monitor: Collects industry info

Disseminator: Shares info with managers

Decisional:

Entrepreneur: Brings new ideas

Resource Allocator: Distributes money & staff

Negotiator: Handles big deals

Disturbance Handler: Solves major issues

Simple Example:

The CEO decides to expand the company into a new state and approves the required budget.

★ 2. MIDDLE LEVEL MANAGEMENT

Examples:

Department Heads, Branch Managers, Plant Managers.

Main Responsibilities:

- Implement plans of top management
- Coordinate between top and lower levels
- Prepare reports, budgets, schedules
- Manage departmental activities
- Give instructions to supervisors

Roles:

Interpersonal:

- **Leader:** Motivates staff
- **Liaison:** Links top and lower levels

Informational:

- **Monitor:** Checks performance
- **Disseminator:** Shares information from top level

Decisional:

- **Resource Allocator:** Assigns tasks
- **Disturbance Handler:** Solves departmental issues
- **Negotiator:** Works with other departments

Simple Example:

A branch manager makes sure the sales team meets the targets given by top management.

★ 3. LOWER / SUPERVISORY LEVEL MANAGEMENT

Examples:

Supervisors, Foremen, Team Leaders, Shift In-charges.

Main Responsibilities:

- Supervise workers' daily tasks
- Give instructions for daily work
- Maintain discipline
- Check work quality
- Report issues to middle managers
- Train employees on the job

Roles:

Interpersonal:

- **Leader:** Guides workers
- **Figurehead:** Represents team in small meetings

Informational:

- **Monitor:** Watches daily progress
- **Disseminator:** Gives instructions

Decisional:

- **Disturbance Handler:** Handles small problems

Resource Allocator: Assigns jobs and shifts

Simple Example:

A supervisor checks whether machine operators are working safely and following procedures.

4. Scientific Management and its Principles & Techniques by F.W. Taylor

Scientific Management was introduced by **Frederick Winslow Taylor**, also called the **Father of Scientific Management**.
His main aim was to **improve worker efficiency and increase productivity** using scientific methods instead of guesswork.

Taylor believed that work should be done in **a scientific way** by studying the best method of doing each job.

★ Principles of Scientific Management

Taylor gave **four main principles**:

---

1. Science, Not Rule of Thumb

Managers should use **scientific methods** to decide the best way of doing work instead of traditional methods.

Example:

Finding the best way to lift materials by measuring time and movement instead of following old habits.

---

2. Scientific Selection and Training of Workers

Workers must be selected scientifically based on their ability and trained properly to perform the job efficiently.

Example:

Selecting a worker with good hand–eye coordination for machine work and training him before assigning tasks.

---

3. Cooperation Between Workers and Management

There should be **cordial (friendly) relations** between workers and management. Both should work together to achieve common goals.

Example:

Management provides incentives, and workers follow standard methods without resistance.

---

4. Equal Division of Work and Responsibility

Work should be divided between workers and managers based on ability. Managers plan the work scientifically, and workers perform the tasks.

Example:

Managers decide the standard method, workers follow it; responsibility is shared.

★ Techniques of Scientific Management

Taylor introduced several important techniques:

---

1. Time Study

Measuring the **time required** to complete each task to set a standard time for the job.

Example:

If a worker takes 2 minutes to pack one box, the standard can be set as 30 boxes per hour.

---

2. Motion Study

Studying the **movements** involved in doing a job to eliminate unnecessary motions and improve efficiency.

Example:

Redesigning a worker's table so that tools are closer and unnecessary movements are reduced.

---

3. Fatigue Study

Finding out how rest breaks affect worker efficiency and deciding the **best work-rest schedule**.

Example:

Giving 10 minutes break after every 1 hour to reduce worker fatigue.

---

4. Method Study

Finding the **best method** of doing a job using observation, analysis, and experiments.

Example:

Standardizing how goods should be arranged, packed, or assembled.

---

5. Standardization

Setting standards for tools, machines, materials, working conditions, and methods.

Example:

Using the same size of tools and standardized materials in production.

---

6. Differential Piece-Rate System

Workers are paid based on their performance.
Those who produce more get **higher wages**, and those who produce less get **lower wages**.

Example:

Standard output = 50 units

Worker producing 60 units → higher rate

Worker producing 40 units → lower rate

This motivates workers to work more efficiently.

5. scientific and administriative approach difference

Here is a **simple, clear, exam-ready difference** between **Scientific Management (F.W. Taylor)** and **Administrative Management (Henry Fayol)**.

Perfect for **5 or 10 marks** depending on how much you write.

★ Difference Between Scientific Approach and Administrative Approach

Basis	Scientific Management (F.W. Taylor)	Administrative Management (Henry Fayol)
1. Focus	Improving **efficiency of workers** and work methods.	Improving **overall management** of the entire organization.
2. Approach	**Bottom-up** (focus on shop-floor workers).	**Top-down** (focus on managers & organization structure).
3. Main Aim	Increase productivity using scientific tools and techniques.	Develop principles to manage the whole organization properly.
4. Level of	Applied mainly at	Applied at **all managerial**

Basis	Scientific Management (F.W. Taylor)	Administrative Management (Henry Fayol)
Application	operational / supervisory level.	levels, especially top management.
5. Principles	Based on scientific study—time study, motion study, standardization, etc.	Based on managerial principles—14 principles like authority, unity of command, etc.
6. Contribution	Techniques for improving work performance of workers.	Management principles for planning, organizing, commanding, coordinating, controlling.
7. Viewpoint	More mechanical and work-oriented.	More administrative and people-oriented.
8. Responsibility	More responsibility on workers to follow standard methods.	More responsibility on managers to lead and manage effectively.
9. Person Associated	Frederick Winslow Taylor	Henry Fayol

★ Short Summary (Easy to Remember)

Taylor → Focus on *workers* and *work methods* (factory level).

Fayol → Focus on *managers* and *management principles* (organization level).

Together, they form the **Classical Approach** of management.

6. scope objective and managemet of nature

★ 1. NATURE OF MANAGEMENT

Nature of management means **the basic features that show what management is and how it works**.
Management is not a single activity; it is a combination of skills, processes, and principles.

1. Management is Goal-Oriented

Management always aims to achieve organizational goals.
Example: Achieving profit, expanding business, increasing sales, improving quality.

---

2. Management is Universal

Management principles can be applied in all types of organizations—business, schools, hospitals, banks, government offices.

---

3. Management is a Continuous Process

Management never ends. It continues daily in planning, organizing, supervising, and controlling.

---

4. Management is a Social Process

Management deals with people. It requires communication, motivation, teamwork, and leadership.

---

5. Management is Multidisciplinary

It uses knowledge from economics, psychology, sociology, mathematics, and computer science.

---

6. Management is Intangible

It cannot be seen directly, but its results can be observed through efficiency, discipline, and growth.

---

7. Management is an Integrating Force

It coordinates people, money, machines, materials, and methods so they work together smoothly.

---

8. Management is Dynamic (Flexible)

Management adapts itself to changes in technology, market trends, customer preferences, and environment.

★ 2. OBJECTIVES OF MANAGEMENT

Objectives are the **desired results** that management wants to achieve.
Management has **three main types of objectives**:

---

1. Organizational Objectives

These objectives focus on the **success and growth of the organization**.

(a) Survival

Ensuring the company continues to exist in a competitive market.

(b) Profit

Generating enough profit to reward employees, expand business, and sustain operations.

(c) Growth

Expanding the company by increasing products, branches, markets, and customers.

---

2. Social Objectives

Management must fulfill its responsibility towards society.

Examples:

- Producing quality goods
- Avoiding pollution
- Providing fair prices
- Supporting community development

---

3. Personal (Individual) Objectives

These objectives relate to the needs of employees.

Examples:

- Good salary
- Job security
- Career growth
- Healthy working environment

★ 3. SCOPE OF MANAGEMENT

Scope of management includes all the **activities performed by managers** in an organization.
It shows the **areas covered by management**.

---

1. Planning

Deciding in advance what to do, how to do, and who will do it.

---

2. Organizing

Creating structure, grouping activities, assigning responsibilities, and allocating resources.

---

3. Staffing

Recruiting, selecting, training, and developing employees.

---

4. Directing

Guiding, motivating, supervising, and leading employees to achieve goals.

---

5. Controlling

Comparing actual performance with planned performance and taking corrective action.

---

6. Coordination

Bringing together all departments (HR, finance, marketing, production) and ensuring they work together smoothly.

---

7. Decision-Making

Choosing the best option among alternatives.

---

8. Communication

Sharing information and instructions between managers and employees.

★ Conclusion

Management has a **broad scope**, covering planning, organizing, staffing, directing, and controlling.
Its **objectives** include organizational goals, employee satisfaction, and social responsibility.
The **nature** of management shows that it is goal-oriented, continuous, social, flexible, intangible, and multidisciplinary.
Together, these features make management essential for the success of any organization.
